

COBRITHERM BOND SHEET HTC 2,0W Glass Free

Data Sheet DS_122

STANDARD CONSTRUCTION

Isolation thickness μm (mils)
75 (2,95) 100 (3,9) 120 (4,72)
Dielectric thickness tolerance
+ 10 μm (+/- 0,4 mils)

DESCRIPTION

B-stage thermally conductive dielectric prepreg glass free.

It is based on epoxy ceramic chemistry and intended for effective bonding between multilayer circuits (PCB) and metal heat spreaders. Its high dielectric strength and resistance to thermal shocks added to its high thermal conductivity assures effective heat dissipation in critical power PCBs. The HTC 2,0W GF is delivered with a transparent film carrier easy to remove.

L Approved QMST2
File: E47820
IPC-4101

| PROPERTIES | TEST METHOD | UNITS | GUARANTEED VALUE | |
|--|--------------------|--------------------|-------------------|---------|
| Time to blister at 288°C, floating on solder (50 x 50 mm) | IEC-61189 | Sec | ≥ 60 | |
| Copper Peel strength, after heat shock 20 sec/288°C (Cu 70 μm) | IPC-TM 650-2.4.8 | N/mm (Lb/in) | > 1,8 (> 10,3) | |
| Dielectric breakdown voltage, AC (1) | IPC-TM 650-2.5.6.3 | kV | 75 μm | 3,0 |
| | | | 100 μm | 5,0 |
| | | | 120 μm | 6,0 |
| Thermal conductivity (dielectric layer) | ASTM-D 5470 | W/mK (W/inK) | 2,0 (0,051) * | |
| Thermal resistance (dielectric layer) | ASTM-D 5470 | K/W | 75 μm | 0,045 * |
| | | | 100 μm | 0,060 * |
| | | | 120 μm | 0,072 * |
| Surface resistance after damp heat and recovery | IEC-61189 | M Ω | - | |
| Volume resistivity after damp heat and recovery | IEC-61189 | M Ωm | - | |
| Relative permittivity after damp heat and recovery, 10 kHz | IEC-61189 | - | - | |
| Dissipation factor after damp heat and recovery 10 kHz | IEC-61189 | - | - | |
| Comparative tracking index (CTI) | IEC-61112 | V | 600 | |
| Water absorption | IPC-TM 650-2.6.2.1 | % | ≤ 0,5 | |
| Flammability, according UL-94, class | UL-94 | Class | V-0 | |
| Glass transition temperature of dielectric layer (by DSC) | IPC-TM 650-2.4.24 | °C | 120 | |

(*) Thermal conductivity and impedance values may deviate by up to +/- 15%.

(1) The Dielectric Breakdown test is conducted in a laboratory setting according to IPC-TM-650 part 2.5.6.3. It involves applying AC voltage until electrical failure occurs on a relatively small area of the dielectric layer using metal electrodes. These values serve as material references and should not be construed as guaranteed. The data is based on typical values from standard production and is provided for general informational purposes. Our company reserves the right to make future changes. It is the responsibility of the user to ensure that the product meets their requirements.

Data Sheet DS_122

PROCESS RECOMMENDATIONS**PREPREG STORAGE**

Store preferably in the original unopened package or sealed by tape. Keep storage climate conditions below 24°C and 55% relative humidity. In the event of storing under very low warehouse temperatures give some time for the packed prepreg to stabilize to room temperature before opening. Keeping the above mentioned storage conditions and avoiding prepreg damage by humidity uptake will give a useful life of 3 months after production date.

PRESS CYCLE

Resin and prepreg parameters have been adjusted for low flow performance. This means they are suitable for heating rates around 3 to 7°C/min, and specific pressures between 18-22 bars. Vacuum applied during press cycle is mandatory for optimal performance. Use of synthetic thermal resistance pads should be test choice. Curing temperature cycle is 1 hour of material temperature over 190°C.

METAL SURFACE PREPARATION

Aluminium is supplied with mechanical treatment and special primer in order to guarantee the correct adherence in the ML process.

PROVISIONAL

The data is based on typical values of standard production and should be considered as general information. Our company reserves the right to future changes. It is the responsibility of the user to ensure that the product complies with his requirements.
